

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

TABLES OF VECTOR HYPERBOLIC FUNCTIONS IN RELATION TO SHORT ALTERNATING CURRENT LINES

Copyright, 1912

PROF. A. E. KENNELLY

Hyperbolic functions are of great importance in the engineering theory of alternating-current lines; because they enable short and simple formulas to replace long, tedious and unwieldy computations. Nevertheless, the use of vector hyperbolic functions in relation to telegraphic, telephonic, or power-transmission circuits has been retarded by the absence of tables of such functions.* Most of the engineer's formulas of circular trigonometry, in relation to surveying, are brief and easily remembered; but in the absence of the customary tables of circular sines, cosines and tangents, they would have little utility.

*The following is a list of the more generally known tables of hyperbolic functions of real variables thus far published, commencing with the best and most comprehensive.

1. "Hyperbolic Functions" by George F. Becker and C. E. Van Orstrand, Smithsonian Institution Publication, Washington, D.C. 1909.
2. "Tafeln der Hyperbelfunctionen und der Kreisfunctionen" by Dr. W. Ligowski, Berlin, Ernst & Korn, 1890.
3. "Nouvelles Tables des Logarithmes" by Major V. Vassall, Paris, Gauthier-Villars, 1872.
4. "The Propagation of Electric Currents in Telephone and Telegraph Conductors." Appendix, by J. A. Fleming, Constable & Co., London, 1911.

The following is a list of Tables of Complex Hyperbolic Functions thus far published:

1. "Hyperbolic Functions" by Dr. James McMahon, Chapter IV of "Higher Mathematics" by Merriam and Woodward, pp. 107-168. Sinh and cosh ($x + jy$) to $x = 1.5$, $y = 1.5$. Wiley and Sons, New York, 1896.
2. "The Alternating-Current Theory of Transmission Speed over Submarine Telegraph Cables," by A. E. Kennelly. *Proc. Int. El. Congress. St. Louis*. Sec. A, Vol. I, pp. 68-105, 1904. Table of sinh, cosh, tanh, cosech, sech, coth ρ / δ , up to $\rho = 20$.
3. "The Distribution of Pressure and Current over Alternating-Current Circuits," by A. E. Kennelly, *Harvard Engineering Journal*, 1905-06. Tables of sinh, cosh, tanh, cosech, sech, coth ρ / δ up to $\rho = 1.5$ for five particular values of δ .
4. "Formulæ, Constants and Hyperbolic Functions for Transmission Line Problems," by W. E. Miller, *General Electric Review*, Schenectady, N.Y., May, 1910, Supplement. Sinh and cosh ($x + jy$) up to $x = 1$, $y = 1$.
5. "Tables of Hyperbolic Functions in Reference to Long Alternating-Current Transmission Lines" by A. E. Kennelly. *Proc. Am. Inst. Electrical Engineers*. Dec., 1911, pp. 2481-2492. Tables of sinh, cosh, tanh, ρ / δ , up to $\rho = 0.5$ by steps of 0.1, and δ from 60° to 90° by steps of 1° .

The Tables here presented are extensions of those printed in the *Proceedings of the American Institute of Electrical Engineers* in December, 1911. They extend from $\rho = 0$ to $\rho = 1$ by steps of 0.1, and from $\delta = 45^\circ$ to $\delta = 90^\circ$ by steps of 1° . They express the required results as plane vector magnitudes, with moduli of five significant digits, and arguments in degrees and three decimals of a degree. Decimals of a degree, rather than degrees, minutes and seconds, have been chosen as being more convenient for electrical engineering computations.

Table I gives	$\sinh \rho / \delta$	
" II "	$\cosh \rho / \delta$	
" III "	$\tanh \rho / \delta$	
" IV "	$\frac{\sinh \rho / \delta}{\rho / \delta}$	}
" V "	$\frac{\tanh \rho / \delta}{\rho / \delta}$	
		{ for converting uniform lines into equivalent circuits or conversely.*

These Tables are sufficiently extensive to meet the needs of alternating-current transmission circuits; but are entirely inadequate for telephone circuits. In order to meet all the needs of telephone circuits, it would be necessary to extend ρ to 90, or ninety times as far as these tables are carried; although such large moduli would only have to be used with large arguments. It would also be necessary to extend the arguments from 0° to 90° instead of from 45° to 90° . Even after suppressing all extensions of Tables IV and V, such extensions of Tables I, II, and III for covering all the needs of the telephone engineer would probably make a book of Tables embracing some 500 pages, although less extended Tables might be welcome, so far as they went. It is hoped that the tables here offered may form the nucleus of a future more extensive series.

* "The Application of Hyperbolic Functions to Electrical Engineering Problems," by A. E. Kennelly. The University of London Press, London, 1911.

Example of the use of Table: $\cosh 0.5/81^\circ = 0.88399/2.406 = 0.88399/2.^\circ 24'.22''$.

NOTE.— $\cosh \rho/\delta = 1.0/\delta^\circ$, when $\rho = 0$ whatever the value of δ .

Example of the use of Table: $\tanh 0.2/70^\circ = 0.20206/69.^\circ 501 = 0.20206/69.^\circ 30.04''$.
 Note.— $\tanh \rho/\delta = 0/\delta$ when $\rho = 0$.

Example of the use of Table: $\frac{\sinh 0.3/80^\circ}{0.3/80^\circ} = 0.98593/0.294 = 0.98593/0.217/38^\circ$

NOTE. $\frac{\sinh \theta}{\theta} = 1.0/0^\circ$ when $\theta = 0/\delta$

Example of the use of Table: $\frac{\tanh 0.4/71^\circ}{0.4/71^\circ} = 1.0434 \sqrt{1.9998} = 1.0434 \sqrt{1.99955^\circ}$

Norm. $\frac{\tanh \theta}{\theta} = 1.0/0^\circ$ when $\theta = 0/8$.

CORRECTING FACTOR $\frac{\tanh \theta}{\theta}$ — Continued

TABLE OF SINES, COSINES, TANGENTS, COTANGENTS, SECANTS AND COSECANTS OF HYPERBOLIC ANGLES.

The Sines, Cosines, and Tangents have been taken from Ligowski's Tables published in Berlin in 1890. The Cotangents, Secants, and Cosecants have been deduced from the preceding quantities.

TABLE OF SINES, COSINES, TANGENTS, COSECANTS, SECANTS AND COTANGENTS OF SEMI-IMAGINARY HYPERBOLIC ANGLES.

A semi-imaginary hyperbolic angle is a complex angle, whose real and imaginary components are equal; or whose vector argument is 45° ; so that the angle is of the type $x / 45^\circ$. The varying modulus x is taken by steps of 0.1 from 0 to 6, and by 0.05 from 6 to 20.1.

As an example of the use of the Table, $\sinh 3.1 / 45^\circ = 4.4948 / 124.^\circ 56'$.

z	Sinh z +		Cosh z +		Tanh z +		Cosech z -		Sech z -		Coth z -
